Contents Volume 131

1 Fuzzy programming and profit and cost allocation for a production and transportation problem
M. Sakawa, I. Nishizaki and Y. Uemura

16 The BMAP/SM/1 retrial queue with controllable operation modes
B.D. Choi, Y.H. Chung and A.N. Dudin

31 Rule and utility based evidential reasoning approach for multiattribute decision analysis under uncertainties
J.-B. Yang

62 Analysis of the potential for spatial redistribution of freight using mathematical programming
F.M. Vanek

78 A total standard WIP estimation method for wafer fabrication
Y.-H. Lin and C.-E. Lee

95 Scheduling in a two-machine flowshop with batch processing machine(s) for earliness/tardiness measure under a common due date
C.S. Sung and J.I. Min

107 An efficient algorithm to allocate shelf space
M.-H. Yang

119 A Lagrangian relaxation approach to the edge-weighted clique problem
M. Hunting, U. Faigle and W. Kern

132 Estimating non-convex production sets – imposing convex input sets and output sets in data envelopment analysis
T. Post

143 A hybrid genetic algorithm for the container loading problem
A. Bortfeldt and H. Gehring

162 Axiomatic characterizations of the CEA solution for rationing problems
S. Lahiri

171 Scheduling tasks on moving executors to minimise the maximum lateness
J. Józefczyk

188 Bicriteria sequencing methods for the mixed-model assembly line in just-in-time production systems
T. Korkmazel and S. Meral

208 Timely inspection and deterrence
M.J. Canty, D. Rothenstein and R. Avenhaus

224 On the polynomial mixed 0–1 fractional programming problems
C.-T. Chang

PII: S0377-2217(01)00077-7

229 Editorial: The 11th Mini-EURO Conference: Artificial intelligence on transportation systems and science
J. Niittymäki and M. Pursula
232 Reinforcement learning in neurofuzzy traffic signal control
E. Bingham
242 Using a multi-agent approach to optimise the train coupling and sharing system
J. Böcker, J. Lind and B. Zirkler
253 An object-oriented neural network approach to short-term traffic forecasting
H. Dia
262 Simulation of stochastic elements in railway systems using self-learning processes
G. Malavasi and S. Ricci
273 Installation and experiences of field testing a fuzzy signal controller
J. Niittymäki
282 Berth allocation planning in the public berth system by genetic algorithms
E. Nishimura, A. Imai and S. Papadimitriou
293 Using intelligent agents for pro-active, real-time urban intersection control
D.A. Roozemond
302 A dynamic route guidance system based on real traffic data
J. Wahle, O. Annen, Ch. Schuster, L. Neubert and M. Schreckenberg
309 Analysis of supply contracts with minimum total order quantity commitments and non-stationary demands
F.Y. Chen and D. Krass
324 Extended DEA-Discriminant Analysis
T. Sueyoshi
352 Time-varying minimum cost flow problems
X. Cai, D. Sha and C.K. Wong
375 A spreadsheet modeling approach to the Holt–Winters optimal forecasting
J.V. Segura and E. Vercher
389 Local design vs. global design: A strategic business choice
D.N. Mallick and S.K. Mukhopadhyay
400 A set packing model for the ground holding problem in congested networks
F. Rossi and S. Smriglio
417 Two direct methods in linear programming
N.V. Stojković and P.S. Stanimirović
440 Chance-constrained programming in activity networks: A critical evaluation
S.E. Elmaghraby, H. Soewandi and M.-J. Yao
459 Starting-time decisions in labor tour scheduling: An experimental analysis and case study
M.J. Brusco and L.W. Jacobs
476 Stochastic goal programming: A mean–variance approach
E. Ballestero
482 The infinite horizon dynamic optimization problem revisited: A simple method to determine equilibrium states
Y. Tsur and A. Zemel
491 Coordinated stocking, clearance sales, and return policies for a supply chain
C.H. Lee
514 An extended warranty policy with options open to consumers
Y. Lam and P.K.W. Lam

530 Recurrent retrial queues with service option on arrival
K. Farahmand and N. Livingstone
536 Optimal resource allocation with minimum activation levels and fixed costs
A. Basso and L.A. Peccati
550 Ranking multicriteria alternatives: The method ZAPROS III
O.I. Larichev
559 Ship scheduling with soft time windows: An optimisation based approach
K. Fagerholt
572 DEA models for the explicit maximisation of relative efficiency
V.V. Podinovski
587 The SIR method: A superiority and inferiority ranking method for multiple criteria decision making
X. Xu
603 Analysis of third-party warehousing contracts with commitments
F.Y. Chen, S.H. Hum and J. Sun
611 Improved methods of assembly sequence determination for automatic assembly systems
H.-R. Lee and D.D. Gemmill
622 A performance analysis of dispatching rules and a heuristic in static flowshops with missing operations of jobs
C. Rajendran and H. Ziegler
635 Sourcing decisions with capacity reservation contracts
D.A. Serel, M. Dada and H. Moskowitz
649 The effects of cognitive style and model type on DSS acceptance: An empirical study
H.-P. Lu, H.-J. Yu and S.S.K. Lu
664 A sum of disjoint products algorithm for reliability evaluation of flow networks
C.-C. Jane and J. Yuan
676 Solving the generalized apportionment problem through the optimization of discrepancy functions
J. Bautista, R. Companys and A. Corominas
685 Comments on properties of the minmax solutions in goal programming – a reply
M. Tamiz, D. Jones and C. Romero
687 Contents Volume 131
